

## Job Posting:

John Todd Ecological Design, Inc. is searching for a P.E. with experience in the design and project management of natural waste, storm, and industrial wastewater systems. The successful candidate will have experience in project design and management for the above areas of activity.

JTED is a practical ecological solutions company offering systems integration of outside and proprietary technology to clients for a variety of environmental solutions. Our clients are primarily companies and developers looking for wastewater solutions that utilize ecological services and energy efficiency.

We are looking for a candidate able to work with biologists, other engineers, architects, and ecological designers to generate stamped construction documents.

Duties will include hands on engineering, reports, site visits, fluency with autodesk engineering software, and general project management. This will include working with other engineering groups that we collaborate with regularly.
